Hi John,

Happy New Year! I hope that the new year finds you happy and healthy.

... now, back to formaldehyde. ☺

Barbara and I are hoping you can take a look at the attached version of the respiratory tract pathology section, focusing on the introduction, animal toxicology (primary focus), and integrated summary sections. We edited the version you sent us, primarily making organizational changes, although also expanding on and rewording some things we felt were unclear.

We are hoping you can read the current version and see if it is clear and makes sense in this form. Specifically, please let us know if we are hitting all the points you feel need to be hit in this section; whether the summarized information, interpretations, and conclusions are accurate; and whether we are missing any things you feel might be important. Just ignore formatting issues, as I extracted it from the compiled version Barbara and I are working from. And, please ignore unresolved issues related to graphical presentation of data and the MOA section, as we will deal with those separately.

I don't expect this will take a long time— hopefully you can get it back to us by the end of this week (as we are bulldozing forward to ERC review)?? Please let us know a date, if not.

Thanks, and welcome back.  
-Andrew
